

RED HAT DEVELOPER TOOLS AND SERVICES

WHAT IS IT?

Red Hat Developer subscriptions deliver pre-configured development tools, as well as developer access to and developer support for all JBoss Enterprise Middleware, Red Hat Enterprise Linux, and all other Red Hat products.

WHAT DOES IT DO?

Red Hat Developer subscriptions help developers complete application development projects faster and more efficiently, speeding time to deployment and maximizing developer productivity.

WHY SHOULD I CARE?

Now you can develop on the same JBoss Enterprise Middleware and Red Hat products that you will deploy on, with a bench of Java and Linux experts to ensure your success, and pre-configured tools that increase efficiency and productivity. With no limit to the number of incidents you can submit, leveraging the flexibility and control of open source is simple and cost effective.

OVERVIEW

Red Hat Developer subscriptions deliver expert advice spanning architecture, design, configuration, optimization, and tuning recommendations. In addition to technical support, each developer contact is granted one entitlement to Red Hat Developer Studio, as well as production-ready versions of all JBoss Enterprise Middleware, Red Hat

Enterprise Linux, and all other Red Hat products for development use only. There are two Red Hat Developer subscriptions:

Red Hat Developer Professional is designed for corporate developers and individuals. It offers one contact and a two business day SLA with unlimited incidents.

Red Hat Developer Enterprise is designed for Independent Software Vendors. It offers two contacts and a four business hour SLA with unlimited incidents.

RED HAT DEVELOPER STUDIO

Red Hat Developer Studio is a set of eclipse-based development tools that are pre-configured for JBoss Enterprise Middleware Platforms and Red Hat Enterprise Linux. Developers are not required to use Red Hat Developer Studio to develop on JBoss Enterprise Middleware or Red Hat Enterprise Linux. But these pre-configured tools offer significant time savings and value, making increasing productivity and speeding time to deployment. Red Hat Developer Studio will be available in summer 2007.

TAKE CONTROL

Having access to the source code means that you have the ability to see exactly what's occurring in the software you're developing on. Being able to see exactly how services are provided is extremely helpful for developers to take advantage of advanced features, help avoid performance bottlenecks, and avoid the costly trial-and-error guesswork that hampers efficient application development and slows time to market.
